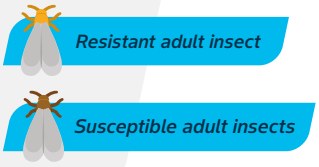
PLANT THE CORRECT REFUGE AREA FOR MAIZE

Trecepta® YieldGard® MAIZE 2

The refuge area plays a critical role in delaying insect resistance by allowing susceptible adult insects to survive and mate with resistant adult insects. This helps maintain the effectiveness of ***Bt maize*** technology and supports sustainable target pest management.

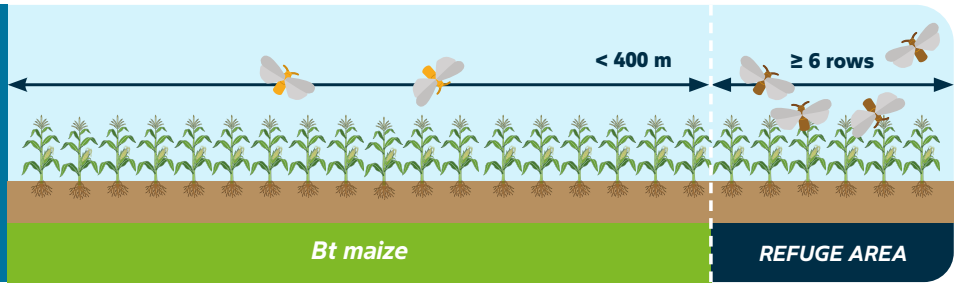
5% = No chemical insecticide control allowed

20% = Chemical insecticide control allowed



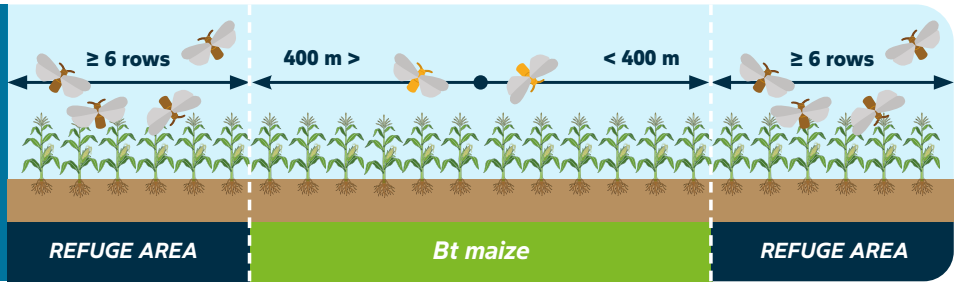
SCENARIO 1

Field size under 400 m



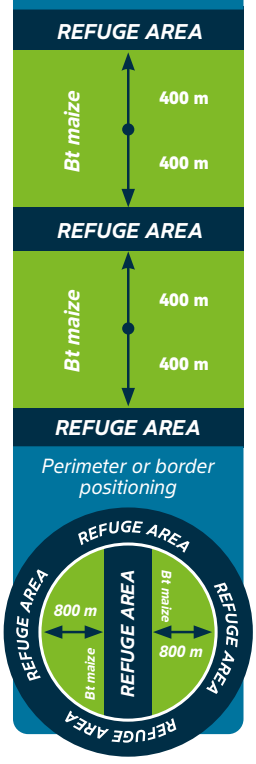
SCENARIO 2

Field size over 400 m



SCENARIO 3

Field size over 800 m



Perimeter or border positioning

Respect the refuge!

Scout Bt planting regularly:

*If there is an excessive amount of more than 5% target pest damage in **Bt maize** fields, contact your seed representative immediately for assistance.*

Your refuge must be planted as follows, regardless of your choice:

- Similar hybrid in the same growing season.
- Plant within 7 days.
- Same agronomical conditions.
- Each grower plants their own refuge.
- Cover borders.
- Within 400 m of Bt plants.
- Don't mix seed.
- Minimum of 6 row strips.
- Don't cross Bt rows.
