

PLANT THE CORRECT REFUGE AREA FOR SOYBEANS

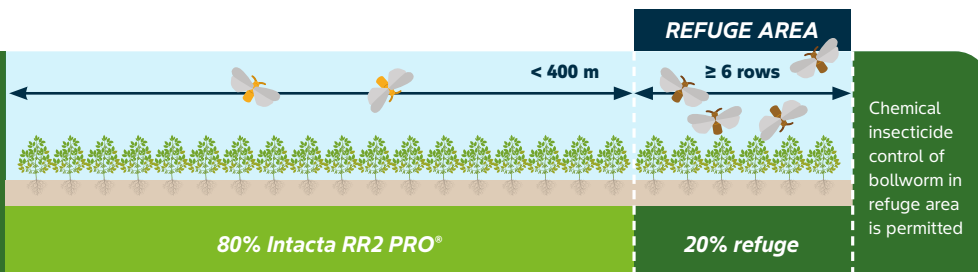

INTACTA RR2 PRO®

The refuge area plays a critical role in delaying insect resistance by allowing susceptible adult insects to survive and mate with resistant adult insects. This helps maintain the effectiveness of **Bt soybean** technology and supports sustainable target pest management.

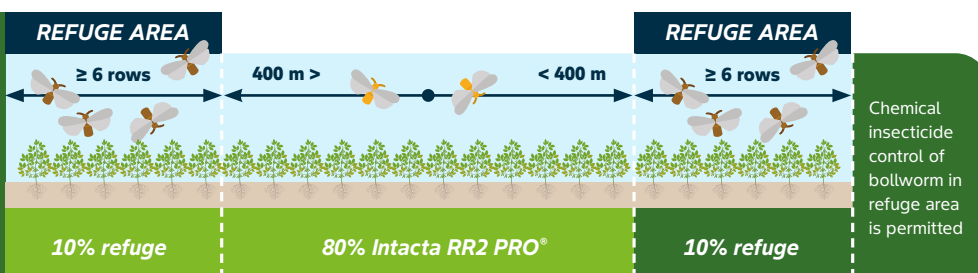

SCENARIO 1

Field size under 400 m

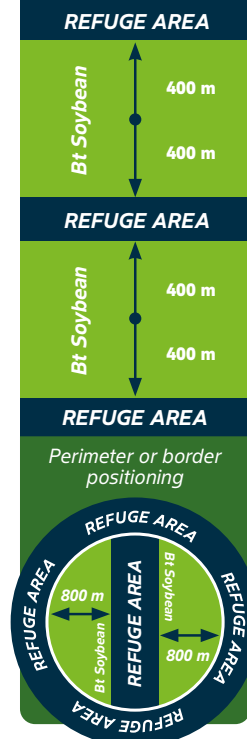

SCENARIO 2

Field size over 400 m

SCENARIO 3

Field size over 800 m

Respect the refuge!

Scout Bt planting regularly:

If excessive (more than 5%) bollworm damage is observed in **INTACTA RR2 PRO**® fields, contact your seed representative immediately for assistance.

Your refuge must be planted in the following manner:

Similar variety with the same maturity group.

Planted within 7 days.

Plant refuge on borders of the field.

Each grower must plant their own refuge area.

Don't mix seed.

Refuge area within 400 m of all **INTACTA RR2 PRO**® plants.

Minimum of 6 row strips.

Grown under the same agronomical conditions.

Don't cross **INTACTA RR2 PRO**® rows with refuge rows.
